IDEAS

2016 - 2017

### FULL OF IDEAS

We started with 3D targets in 2003. After 3 years of experience 2006 we started producing EP (Easy Pull) material. 3D targets and inserts inserted in polyfoam targets for target and field archery. The inserts can be adjusted according to the different rules and all other needs our customers may have. Our products are used by clubs and associations that wants to have long lasting targets but also on the highest level competitions like World Cups and World Championships. During the development, we experimented with materials that are flexible, resistant against physical load, but at the same time don't damage the arrows. During our researches, we concluded that due to the mode of usage, it is not one, but a combination of materials that must be used to satisfy all needs. We constantly work on developing new materials and products and making existing products better and more price worthy. We strive every minute to live and act according to our slogan: „Full of ideas”, this is best for our customer.

**NEW** **HOLE IN**

Sometimes less is more. In our efforts to create more value to our customers a solution emerged that is new on the 3D market. As foam material is really expensive if you want to reduce price there are two ways to go. Reduce the weight of material meaning less material put in the targets, which is the path others walk resulting poorer quality targets. We do not want to make compromises on the well-known extraordinary quality of  $\Xi$ even targets so we looked at where it is not necessary to have material at all, as cheapest material on earth at the moment is air being free of charge. If we have a hole where targets are not used to much but we still have enough foam to stop just in case any arrow is shot there was the solution. HOLE IN was born. Same quality, same feeling, same durability to a reduced price. We are proud to present the HOLE IN series.

# ≡COWAVE≡

≡conomical & ecological solutions  
125x125x20 cm

**TROL Trolley**  
for ≡LEVEN Targets  
System Symbiosis of an  
≡COWAVE≡ , an 4-leg  
Stand and Trolley.  
Life is easy with ≡LEVEN

## IF 10 is the maximum get ≡LEVEN

As arrow and bow technology is rapidly developing it is now necessary to have a new generation of targets on the archery market. ≡leven has always been a pioneer when it comes to inventions on the target market. The "≡CO" name reflects the reduced ecological footprint we leave since 80% of the weight is recycled material. The "≡CO" also reflects that this product is economically correct for the customer, since it is cheaper than any other solution with the highest quality level. A cheaper product with higher quality is a good combination making ≡COWAVE≡ unbeatable.

We have put all available knowledge and required material in this product to achieve:

- arrow stop at any weather condition, at any pundance, any type of arrow
- unbeatable durability with ≡ASY PULL inserts
- arrow saving technology (longer arrow-life)
- easy pulling for to archer with ≡ASY PULL inserts
- modular solution the make target handling easier
- any target type or variation can be built and adopted to your needs

To achieve all the required features above a high density shared of recycled material is used. High density means heavier targets. ≡cowave is heavier than our previous targets of the same size. This is one of the reason why we use the modular system. The other one is the high grade of flexibility it gives our customer to have the target customized to their needs at different events or different stage of one event.
